Some require experience and do not work on all types of file loss, while others depend on proprietary software, and can be expensive. There are a couple of free tools out there, but I do not know whether they work. One is Recuva, while the other I cannot remember but probably has something to do with Linux. Q: using git hook on an existing project, does this pose a security risk? I have been using git for some time now and I can't help but notice that in my project directory I have a.git folder that holds a few files. I will explain what that folder is. When I create a new git project, the git project folder directory will contain a.git folder that will hold the git user config file, the.gitignore file, the.git/config file that will be generated as part of the git init command as well as the project directory that contains the project's files. When I create a new file, for example, I will be prompted to create the file using git. On the other hand when I commit those files, the content of that file will be committed to my project's git repository. My question is, is using a hook dangerous and poses a security risk? The project I am working on will be an nHibernate project, and for some reasons, we have removed the nHibernate.cfg.xml file. This means that git will be creating the.git folder with the.gitignore file,.git/config file, the project directory with the nHibernate.cfg.xml file and the files that we have currently in
