A really smart brain child to a worksheet entry booking tool the application will allow you to set up & use company independent work.Q: Unable to get x509Certificates setting working in an Azure role after upgrading to Windows Server 2012 R2 Setting x509Certificates in the Azure cloud service Role def is no longer working. Previously, in Windows Server 2008 R2, x509Certificates was properly populated with the .cer file in the "Certificates" folders at the machine's Local Machine/Users/[User] and Local Machine/Users/[User]/AppData/Roaming/Microsoft/Crypto/RSA/Thumbprints and Config Drive defaults. Now, in Windows Server 2012 R2 this content is not in the Local Machine/Users/[User] and Local Machine/Users/[User]/AppData/Roaming/Microsoft/Crypto/RSA/Thumbprints and Config Drive defaults folders. Config Drive is enabled in ServiceDefinition.cscfg file,.cer file is embedded in WebRole.csdef. How can I recover this content? A: Part of my answer is a duplicate of this question that got asked in Azure support forums. It has an answer that I will try to summarise here. After many years of running, Microsoft changed the location of the certificates. For anyone who might have used one of the *-certificates.exe tools like certmgr.msc - the .cer files in
